# From evaluation to governance support

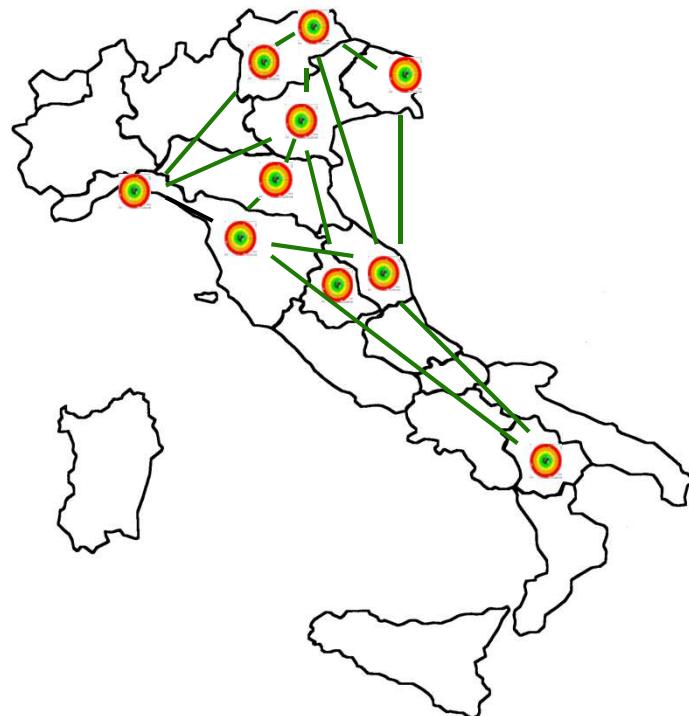

Evaluation

Governance

# The Inter-regional Performance Evaluation System

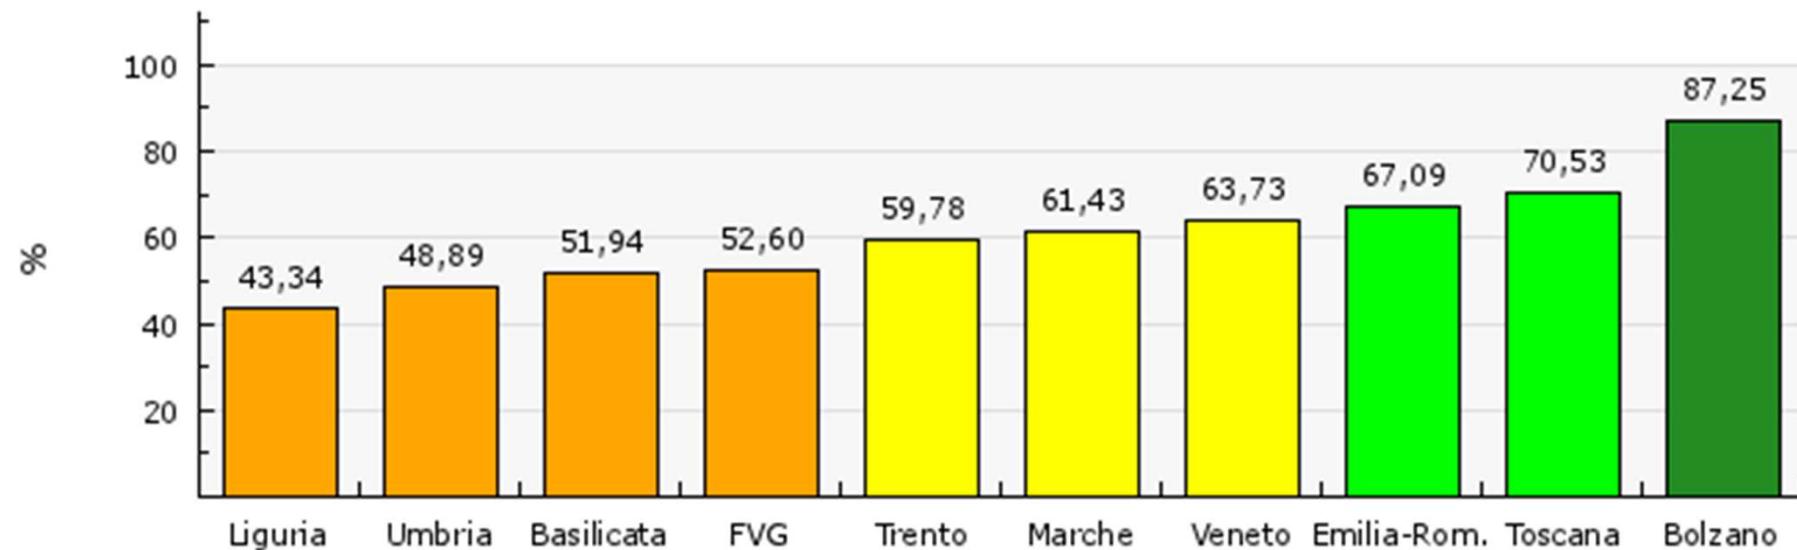

- 10 Regions
- Around 160 indicators
- 6 areas: a) population health's status, b) ability to pursue regional strategies, c) clinical evaluation, d) patient satisfaction, e) working climate survey, f) operational efficiency and economic performance
- 5 band evaluation
- Regular reporting & Open access  
(<http://performance.sssup.it/network>)
- Frequent meetings & spread of best practices

# The graphic representation of one of the 160 indicators

## Indicator C5.2: Femur fractures operated within 2 days from admission - 2013

In a dynamic perspective variability should be evaluated together with trend...

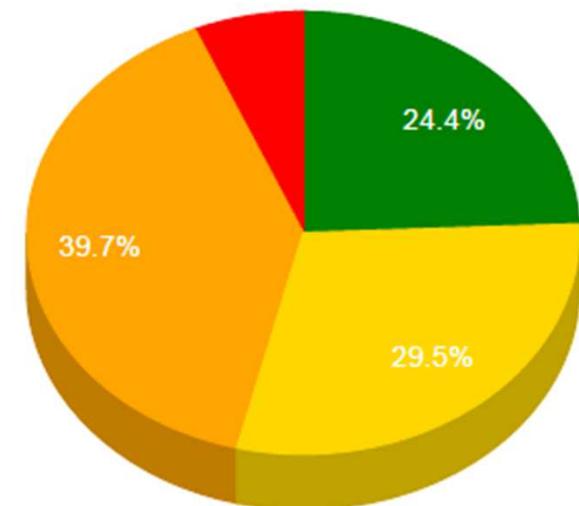

## Trend & variability joint analysis

**Liguria: 92 indicators**

**Marche: 78 indicators**

Excellent performance: improved trend, decreased variability

On the right way: improved trend, increased variability

Caution: worsened trend, increased variability

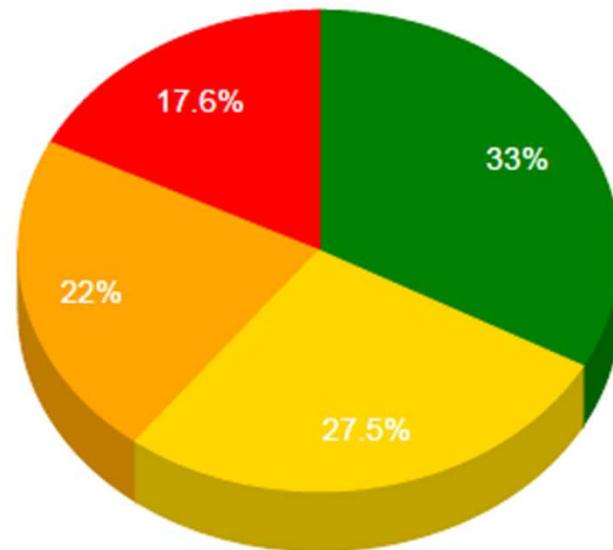

High priority: worsened trend, decreased variability

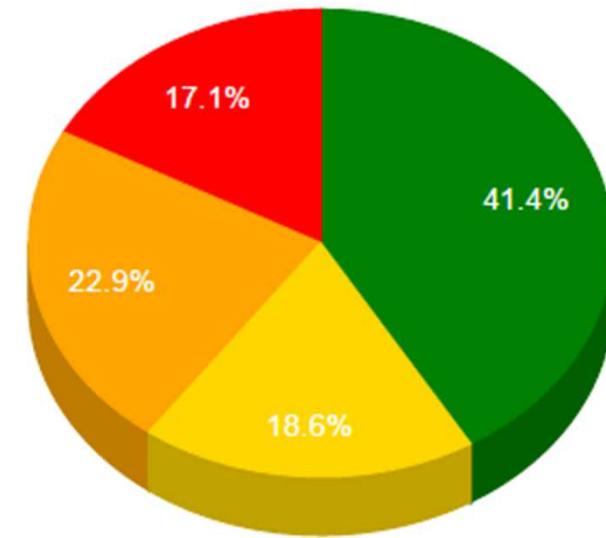

## Trend & variability joint analysis

**Umbria: 91 indicators**

**Basilicata: 70 indicators**

Excellent performance: improved trend, decreased variability

On the right way: improved trend, increased variability

Caution: worsened trend, increased variability

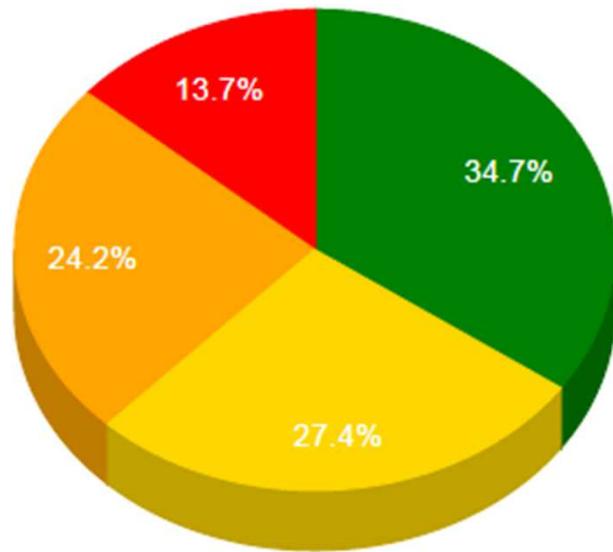

High priority: worsened trend, decreased variability

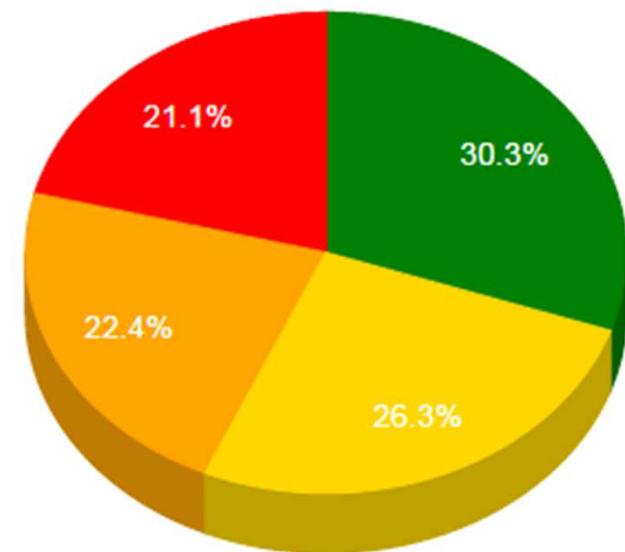

## Trend & variability joint analysis

**Emilia-Romagna: 95 indicators**

**Veneto: 76 indicators**

Excellent performance: improved trend, decreased variability

On the right way: improved trend, increased variability

Caution: worsened trend, increased variability

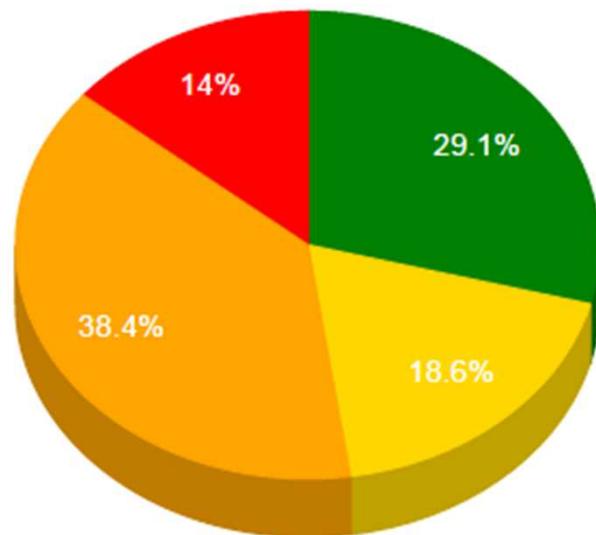

High priority: worsened trend, decreased variability

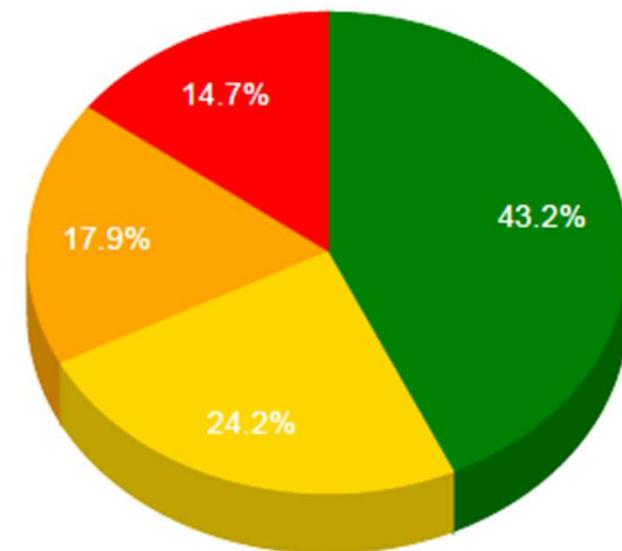

## Trend & variability joint analysis

**Friuli-Venezia Giulia: 86 indicators**

**Tuscany: 95 indicators**

Excellent performance: improved trend, decreased variability

On the right way: improved trend, increased variability

Caution: worsened trend, increased variability

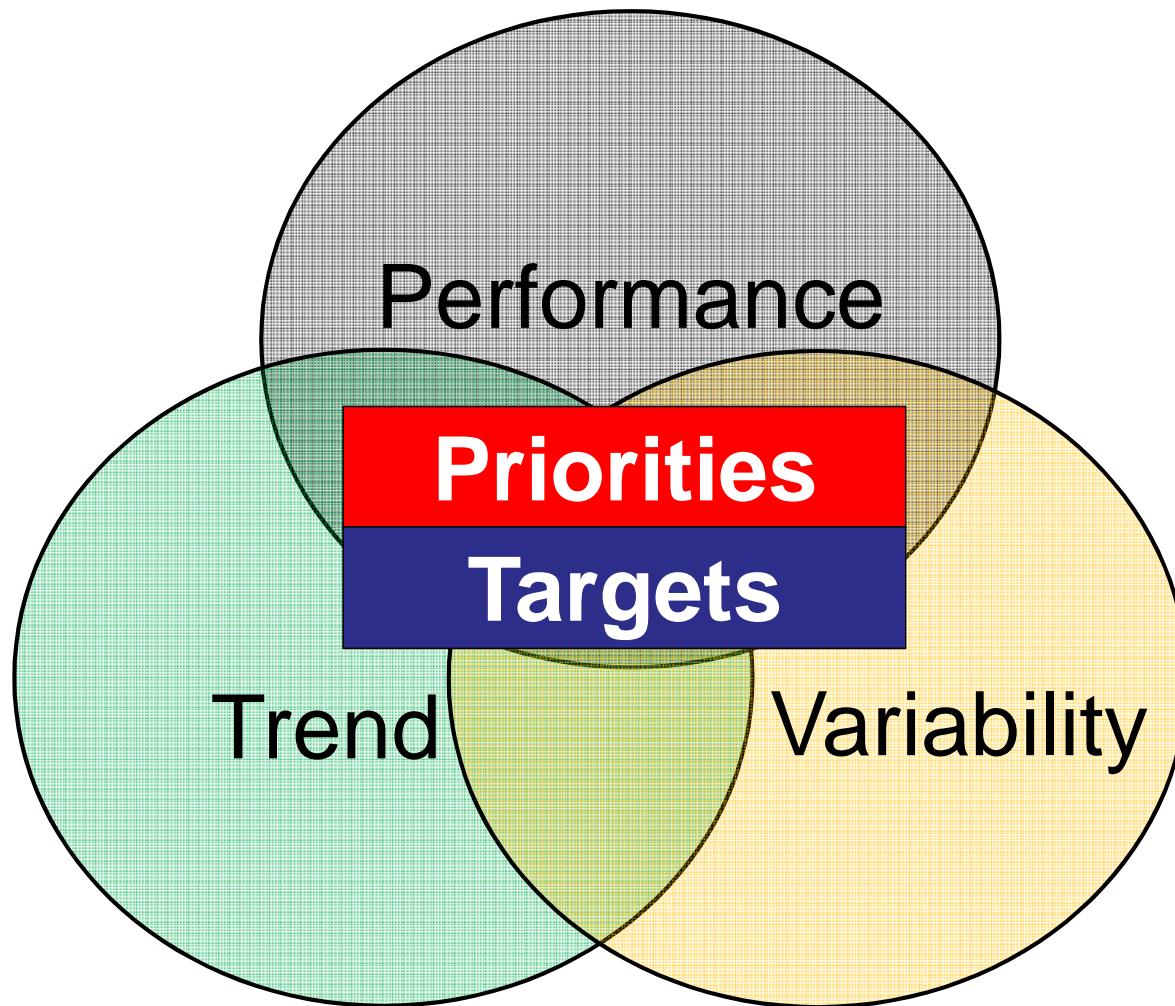

High priority: worsened trend, decreased variability

## A three-dimensional methodology

## The tool

Within each area: population health's status, ability to pursue regional strategies, clinical evaluation, patient satisfaction, staff satisfaction, efficiency and financial performance, an indicator is deemed to deserve high priority if it shows criticalities on all the three dimensions performance, trend, variability

Policy makers and managers need appropriate graphic representation to detect high priority issues: colours are quite effective!

Code	Indicator definition	Monitored at the inter-regional level	Monitored at the regional level	2013 Regional Evaluation (based on the Network average)	The Cluster Evaluation	The Trend and Variability analysis	Jan-May 2014 Monitoring (if available)
# 1	Indicator # 1	X		2,17	2,78	Improved trend and decreased variab.	Target achieved
# 2	Indicator # 2	X		2,4	2,74	Improved trend and decreased variab.	
# 3	Indicator # 3		X	3,08	2,04	Improved trend and decreased variab.	
# 4	Indicator # 4	X		2,66	2,71	Improved trend and decreased variab.	Worsening
# 5	Indicator # 5	X		2,12	2,15	Improved trend and decreased variab.	Stable
...	...	...	...	...	...	...	...

Indicators that are assessed at the inter-regional level are eventually integrated by regional-level computed ones

Code	Indicator definition	Monitored at the inter-regional level	Monitored at the regional level	2013 Regional Evaluation (based on the Network average)	The Cluster Evaluation	The Trend and Variability analysis	Jan-May 2014 Monitoring (if available)

Elective surgery variability	B25.1a.5 Std. hospitalization rate for tonsillectomies per 100,000 residents	x	x	3,22	2,30	Improved trend and increased variab.	Improving	
	B25.1a.7 Std. hospitalization rate for vein stripping per 100,000 residents	x	x	2,61	2,92	Improved trend and increased variab.		x
Appropriateness of drug prescription	C9.1 Consumption of proton pump inhibitors	x	x	2,46	2,55	Worsened trend and increased variab.		x
	C9.2 Percentage of statin-treated patients abandoning drug therapy							
	C9.3 Incidence of sartans							x
	C9.4 Consumption of selective serotonergic antidepressants (antidepressants)							x
	C9.8.1.1 Consumption of antibiotics							x
	C9.9.1.1 Percentage of antidepressants abandoning drug therapy							

About 30 of them are suggested to deserve special attention

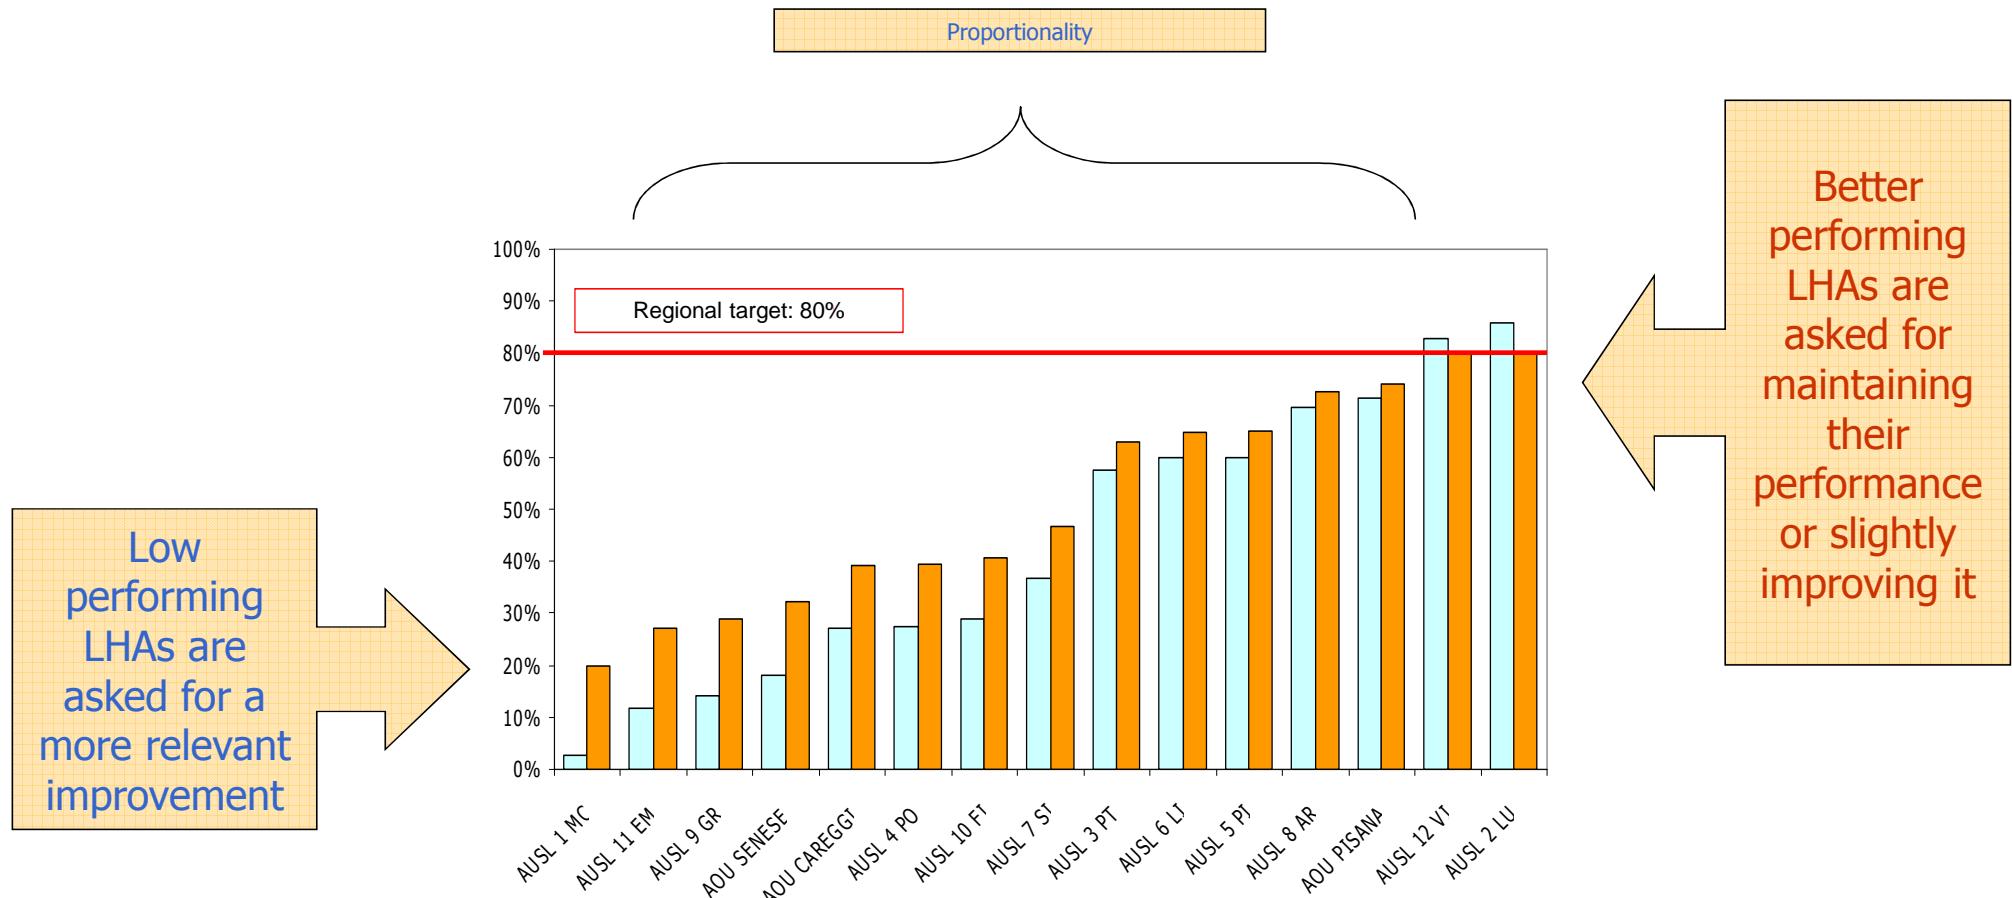

## Reduce variation in the management agenda: tailored target setting

## Defining tailored targets

# Reward system in the Tuscany Region

INTRINSIC  
HEALTH PROFESSIONALS

Professional reputation  
public disclosure of results  
Enabling peer review  
mechanism

EXTRINSIC  
CEO (managers)

Financial incentives that  
can achieve the 20% of  
the salary

CEO's rewarding system added emphasis on the Tuscan PES: **incentivized** indicators **improve 2.7 times** than other PES indicators. Moreover the results of a second model on 2008-2010 data show that incentivized indicators that keep into account the **baseline performance and are tailored improve more than the others (OR 1.5)**.

Due to this empirical evidence, in 2011 every Health Authority receives personalized target for each indicator of the Tuscan PES in order to gather the financial reward related to the overall indicator. <sup>32</sup>

S.Nuti, M.Vainieri: Do CEO reward system drive performance in the public health sector?Evidence from Italy., 2014, Under Review
